

D. improving the local microclimate than to providing tourist attractions.

Correct Answer: A

Rationale

Choice A is the best answer because it most effectively uses data from the graph to complete the assertion about urban agriculture. The graph shows the average survey ratings, on a scale of 0 to 5, from three groups of people—project leaders, stakeholders, and the general public—concerning the contributions of urban agriculture. According to the graph, project leaders gave an average rating of approximately 2 to urban agriculture’s contributions to the provision of medicinal plants, which is lower than the average rating of approximately 3 that project leaders gave to urban agriculture’s contributions to both improving the local microclimate and improving a sense of attachment to the neighborhood. This shows that project leaders rated urban agriculture as contributing less to providing medicinal plants than to improving the local microclimate.

Choice B is incorrect because the graph doesn’t provide data about urban agriculture’s contribution to educational opportunities; therefore, this comparison can’t be made. Choice C is incorrect because it contradicts the data shown in the graph. On average, project leaders gave a rating of approximately 3 to urban agriculture’s contributions to improving the local microclimate, which is higher, not lower, than the average rating of approximately 2 that they gave to its contributions to providing medicinal plants. Choice D is incorrect because the graph doesn’t provide data about urban agriculture’s contribution to providing tourist attractions; therefore, this comparison can’t be made.
