Question

While researching a topic, a student has taken the following notes:

- *Certhidea olivacea* is a perching bird that can be found on the Galápagos Island of Pinzón.
- *Creagrus furcatus* is a seabird that can be found on the Galápagos Island of Darwin.
- Conservation organizations evaluate the risk that species will become extinct in the near future.
- *C. olivacea* faces a high risk of extinction.
- *C. furcatus* faces little risk of becoming extinct in the near future.

The student wants to compare the extinction risk faced by *C. olivacea* with that faced by *C. furcatus*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

Answer

- A. According to conservation organizations, *C. olivacea* has a higher risk of becoming extinct in the near future than *C. furcatus*.
- B. *C. furcatus* faces a high risk of extinction, while *C. olivacea* faces little risk of becoming extinct in the near future.
- C. Conservation organizations have evaluated both *C. furcatus*’s and *C. olivacea*’s risk of becoming extinct in the near future.
- D. *C. olivacea* is a perching bird that faces a high risk of extinction.

Correct Answer: A

Rationale

Choice A is the best answer. The sentence compares the extinction risks of the two species, noting that *C. olivacea* has a higher risk of becoming extinct in the near future than *C. furcatus*.

Choice B is incorrect. While the sentence does compare the extinction risks of the two species, it misrepresents information from the notes; *C. olivacea* faces a higher risk of becoming extinct in the near future than *C. furcatus*, not the other way around. Choice C is incorrect. While the sentence mentions that conservation organizations have evaluated both species for extinction risk, it doesn’t compare the extinction risks of the two species. Choice D is incorrect. While the sentence states that *C. olivacea* faces a high risk of extinction, it doesn’t mention *C. furcatus* or compare the extinction risks of the two species.
