Question

Unsupervised machine learning is an approach that computer scientists like Nina Miolane use to engineer artificial intelligence technologies. It involves training computer algorithms to organize unlabeled data sets. Multitask learning is another approach. \_\_\_\_\_ involves training computer models to perform multiple tasks at the same time.

Which choice completes the text so that it conforms to the conventions of Standard English?

Answer

- A. Those
- B. They
- C. It
- D. Some

Correct Answer: C

Rationale

Choice C is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "multitask learning" and clearly indicates what multitask learning involves.

Choice A is incorrect because the plural demonstrative pronoun "those" doesn't agree in number with the singular antecedent "multitask learning." Choice B is incorrect because the plural pronoun "they" doesn't agree in number with the singular antecedent "multitask learning." Choice D is incorrect because the indefinite pronoun "some" is ambiguous in this context; the resulting sentence leaves unclear what exactly "involves training computer models."
